## Summary

My name is Johan Sebastián Castro García. I'm a programmer with over three years of experience in application development. I specialize in front-end development and am passionate about open source. I work in diverse teams and strive to build strong relationships with my colleagues.

## Technical Skills

- **Programming Languages:** HTML, CSS, JavaScript, TypeScript
- **Web Technologies:** Vue, React, Preact, Nuxt, Next.js
- **Databases:** SQLite, PostgreSQL
- **Cloud Services:** Google Cloud Platform (GCP)
- **Tools:** Git, Github, Docker, VScode
- **Other:** C, Shell, Python, Zig

## Professional Experience

### DiensCO (Frontend Developer) June 2023 - Feb 2025

- Previously, [domiplace.com](https://domiplace.com) only had a mobile app, so my team and I started building the web app..
- has been migrated with existing [admin.efici.co](https://admin.efici.co) from Vue 2 to Nuxt.js and performance increased by 100% Unlike its previous version.
- An order management application has been successfully created in order to have an even faster alternative to domiplace.com
- The [admin.efici.co](https://admin.efici.co) application had logic errors and was not user friendly. The migration helped so much that it allowed us to correct 70% of the errors, and we were always working continuously to have 100% coverage.

## Education

I finished high school in November 2021 and began my journey in the software world. I took two courses at [Google Active](#), which are [Cloud Computing](#) and [Web Development](#). I have also won certificates in [Udemy](#) and [CodigoFacilito](#), all for learning purposes.

## Language

- **Inglés A1** (Próximamente A2)
- **Español** (Nativo)
